# PAJARITO-AZUL

This Postman collection contains a set of endpoints for a simple Twitter clone. The endpoints allow users to create, get, update, and delete tweets.

To use this collection, import it into Postman and then run the requests. The requests will be sent to the server and the responses will be displayed in the Postman console.

This collection can be used to test the functionality of the Twitter clone project or to document the endpoints.

## Tweets

## CRUD tweets

### POST  create-tweet

localhost:3000/tweets/create

**AUTHORIZATION**  Bearer Token

Token                                          <token>

**Body**  raw (json)

```json
{
    "tweetDesc":"This is the Tweet content",
    "tweetImage":"tweetImage"
}
```

### GET  get-all-tweets

localhost:3000/tweets/get-all-tweets?page=1&per_page=10

Token                                      <token>

PARAMS

page                                       1

per_page                                   10

## GET   get-tweet

localhost:3000/tweets/get-tweet/10

AUTHORIZATION  Bearer Token

Token                                      <token>

Body  raw (json)

```json
{
    "tweetID": "1"
}
```

## PUT   update-tweet

localhost:3000/tweets/update-tweet/1

AUTHORIZATION  Bearer Token

Token                                      <token>

Body  raw (json)

**json**

```
{
    "tweetDesc":"desc update",
    "tweetImage":"image update"
}
```

---

## DELETE   delete-tweet

localhost:3000/tweets/delete-tweet/9

### AUTHORIZATION  Bearer Token

Token                                  <token>

---

## GET   get-tweets-of

localhost:3000/tweets/get-tweets-of/pitilocote23?page=1&per_page=10

### AUTHORIZATION  Bearer Token

Token                                  <token>

### PARAMS

page                                   1
per_page                               10

---

## LikeTweet

---

## POST   like-tweet

localhost:3000/users/like-tweet

### AUTHORIZATION  Bearer Token

**Token** <token>

**Body** raw (json)

```json
{
    "tweetId":"10"
}
```

## CommentTweet

**POST** add-comment-to

localhost:3000/users/add-comment-to

AUTHORIZATION Bearer Token

**Token** <token>

**Body** raw (json)

```json
{
    "tweetId":"34",
    "comment":"prueba de comentario en nuevo tweet 20112023"
}
```

**POST** delete-comment

localhost:3000/users/delete-comment

AUTHORIZATION Bearer Token

**Token** <token>

**Body** raw (json)

```json
{
    "commentId":1
}
```

## GET get-comments-from

localhost:3000/tweets/get-comments/10?page=1&per_page=10

**AUTHORIZATION** Bearer Token

Token                                           <token>

**PARAMS**

page                                            1

per_page                                        10

# Users

## CRUD users

postman to users blueprint

## POST sign-up

localhost:3000/users/sign-up

**Body** raw (json)

```json
```

```json
{
    "user":"pitilocote23",
    "name":"pitirijas sanchez",
    "password":"Pitirijas$23"
}
```

## GET  search-user

localhost:3000/users/search-user/joczn?page=1&per_page=10

### AUTHORIZATION  Bearer Token

Token                                    <token>

### PARAMS

page                                     1

per_page                                 10

## POST  update-user

localhost:3000/users/update-user

### AUTHORIZATION  Bearer Token

Token                                    <token>

### Body  raw (json)

```json
{
    "user":"UpdateUser",
    "name":"pruebaUpdateName",
    "userImage":"pruebaUpdateImage",
    "description":"pruebaUpdateDescription"
}
```

# UserDetails

## POST   get-data-user-byId

localhost:3000/users/get-data-user-byId

### AUTHORIZATION   Bearer Token

Token                         &lt;token&gt;

### Body   raw (json)

```json
json
{
    "userId":"4"
}
```

## GET   get-data-user

localhost:3000/users/get-data-user

### AUTHORIZATION   Bearer Token

Token                         &lt;token&gt;

# SignIn

## POST   sign-in

localhost:3000/users/sign-in

### Body   raw (json)

**json**

```json
{
    "user":"pitilocote23",
    "password":"Pitirijas$23"
}
```

## Follow

## POST  follow-user

localhost:3000/users/follow-user

### AUTHORIZATION  Bearer Token

Token                                  <token>

### Body  raw (json)

**json**

```json
{
    "userToFollow":6
}
```

## GET  check-follow

localhost:3000/users/check-follow/4

### AUTHORIZATION  Bearer Token

Token                                  <token>

## GET  followers

localhost:3000/users/followers/4

Token                                                    <token>

## GET   following

localhost:3000/users/following/5

Token                                                    <token>

## Home

## GET   get-tweets-home

localhost:3000/users/get-tweets-home?page=1&per_page=10

Token                                                    <token>

PARAMS

page                                                     1
